

Public Transport Research @ Monash

Professor Graham Currie Farhana Naznin <u>Dr David Logan</u>

Public Transport Research Group Institute of Transport Studies Monash University, Australia

TSV Visit 07-03-2016

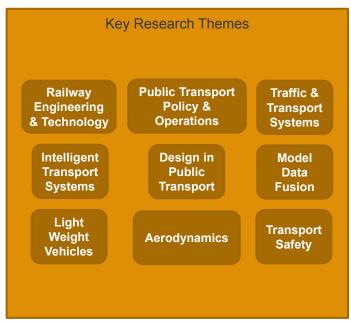

PTRG is part of a wider collaborative framework in transport research across multiple groups/ faculties

The new PTV-Monash Public Transport Research Group (PTRG) commenced on March 1st 2015

- World First joint Authority/Uni. Research and Training Initiative
- Started March 1st 2015 for 5 years; then continues subject to review
- \$ 2.5M PTV funding including 4 PhD scholarships

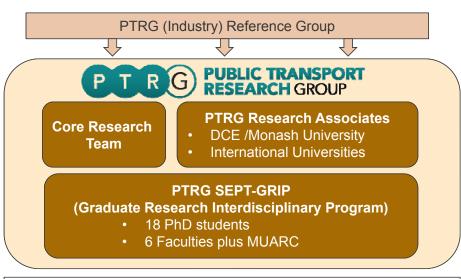

3

SEPT-GRIP is its first initiative – it doubled funding leveraging the Monash GRIP program and industry support

- · World First joint Authority/Uni. Research and Training Initiative
- Started March 1st 2015 for 5 years; then continues subject to review
- \$ 2.5M PTV funding including 4 PhD scholarships
- Plus \$2M funding Monash and \$0.5M Other Industry; \$5M total

There are 18 topics...

1. Personal Safety on Public Transport 2. Mining Big Data and Visualisation

3. Improving Network Synchronisation in Melbourne 4. PTV as a "Shared Mobility" Agency

5. Changing Travel Behaviour to Reduce Car Use Including Increased PT Use

6. Tourism and Public Transport

7. Exploring Reliability Engineering Approaches between Melbourne and Best Practice Railways

8. Understanding & Improving Gender Diversity in the PT Workforce

9. Exploring an Effective Modular Station Design Structure for Melbourne Designing the Urban Rail Environment to Reduce Vandalism and its Impacts on Service Reliability and Customer Experience

11. A New Model for SMART Bus and Tram Priority Implementation

12. Simulating Bus and Tram Priority in Traffic Flows

13. Best Practices in Placemaking and Street Redesign as Part of Tram Modernisation 14. Older People and Falls in Trams

15. Transit Network Design with Consolidated High Frequency Fixed Routes plus Demand Responsive 'Last Mile' Service Patterns 16. Future Bus a Multi-Purpose Bus for Changing Needs and Roles

17. The New Bus Rider – An in-depth synthesis of motivations, influences impacts

18. Exploring the Road Safety Impacts of Bus Safety Inspections

15

...with 6 Industry Partners...

- 1. Personal Safety on Public Transport

Project Outline

Trams have superior ride quality to buses and can also accelerate and decelerate at a quicker rate. This and the frequent need for braking due to traffic interference has been one of the many causal factors said to have generated increasing rates of passenger falls within trams. This a major concern with an aging population and increased use of trams. This project seeks to better understand the extent, conditions and causal influences of incidence of passenger falls in trams by older passengers. Its central aim is to identify and test mitigation strategies to reduce the rates of these incidents and their impact including specific redesign concepts for the interior of trams. This project is paired with project 9 and 16 (which also concern aspects of design for an aging population); these students will work together to identify mitigation strategies for trams.

۱۵

18. Exploring the Road Safety Impacts of Bus Safety Inspections

Monash University Accident Research Centre

Project Outline

The Victorian bus industry, like other Australian jurisdictions, must meet safety regulation requirements including mandatory bus safety inspections with both annual independent inspections and more regular documented selfinspection processes. This project aims to understand the road safety impacts of these regulatory standards through a review of current crash records and their links to bus safety issues and a comparative analysis of bus safety in other regulatory contexts. The project will contrast bus and coach crash records against those of other transport industries including the Australian truck and heavy vehicle industry who do not have mandatory independent safety inspection regulations. The project will also seek to understand general risk factors for bus crashes to better understand safety standards in the context of other risks. It will also seek to better understand what aspects of safety inspections are having greater impacts on road safety than others.

- •to better evaluate pedestrian safety at platform stops through the adoption of a more advanced before—after crash analysis method, the comparison group (CG)method.
- In addition, a modified crash analysis will be conducted to consider differences in <u>passenger</u> <u>volume</u> between new and older design stops, aiming to test the effect of passenger exposure on safety impacts.

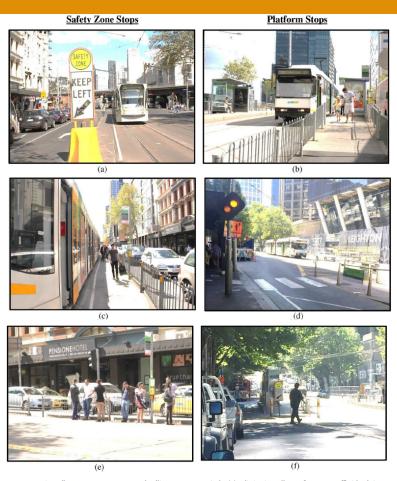

Fig. 1. Old and new tram stops in Melbourne at Spencer street and Collins Street, respectively: (a) a distinctive yellow 'safety zone' traffic island sign at safety zone stop, (b) wide and safe platforms for passengers at platform stop, (c) safety zone stop with narrow waiting area, (d) zebra crossing for pedestrian at the end of platform stop, (e) typical layout of safety zone stop with gap in metal barriers, and (f) platform stops with narrow side traffic lane and on-street parking near platforms.

Treatment / Comparison Group Stops

 Table 1

 Platform tram stops selected for this study.

No.	Tram routes	Stop number	Location	Implementation date
1	109	6	Collins St at Swanston St	October 2001
2	109	9	Collins St at Spring St	April 2002
3	109	5	Collins St at Elizabeth St	October 2005
4	96	122	Spencer St at Collins St	December 2005
5	86	55	Plenty Rd at Albert St	June 2007
6	96	134	Fitzroy at Park St	July 2007
7	48, 75	8	Flinders St at Spring St	May 2008
8	86, 96	10	Nicholson St at Albert St	May 2008
9	55, 59	14	Flemington Rd at Grattan St	June 2008
10	55, 59	14	Flemington Rd at Park Dr	June 2008
11	57	23	Racecourse St at Stubbs St	July 2008
12	57	15	Abbotsford St at Arden St	June 2009
13	Multiple	25	St Kilda Rd at Commercial St	June 2010
14	Multiple	27	St Kilda Rd at High St	June 2010
15	Multiple	29	St Kilda Rd at Union St	October 2010

Table 2Descriptive statistics of crash counts, AADT and pedestrian volume for treatment and comparison groups.

Sites	Parameters	Before	After	% Change
Treatment group	Pedestrian-involved all injury crashes per year	17	8	-52,9%
	Pedestrian-involved FSI crashes per year	7	3	-57.1%
	Average AADT per site	14,907	13,600	-8.76%
	Average passenger volume per site per week (2011)	34,5	03	
Comparison group	Pedestrian-involved all injury crashes	14	12	-14.3%
	Pedestrian-involved FSI crashes	6	4	-33,33%
	Average AADT per site	16,044	14,348	-10.57%
	Average passenger volume per site per week (2011)	26,6	78	

Results

Table 4

Results of before-after crash analysis using the CG method.

Crash types	Crash change factor, $\hat{ heta}$	Standard deviation, $\hat{\mathbf{s}}_{ heta}$	Safety effectiveness
Pedestrian-involved all injury crashes	0.571	0.14	+42.9%*
Pedestrian-involved FSI crashes	Out	comes are insignificant at 95% level	

^{*} Significant at the 95% level.

Table 5Results of the CG before–after crash analysis using the modified crash counts.

Crash types	Parameters			
	Crash changing factor, $\hat{ heta}$	Standard deviation, $\hat{s}_{ heta}$	Safety effectiveness	
Considering passenger increment				
Pedestrian-involved all injury crashes	0.191	0.076	+80.9%*	
Pedestrian-involved FSI crashes	0.142	0.063	+85.8%*	
Without considering passenger increment				
Pedestrian-involved all injury crashes	0.193	0.075	+80.7%*	
Pedestrian-involved FSI crashes	0.159	0.067	+84.1%*	

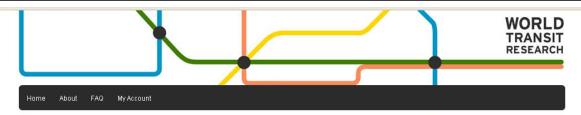

^{*} Significant at the 95% level.

About World Transit Research

World Transit Research (WTR) is designed to help public transport practitioners and researchers get easier access to quality research in the field of public transport planning. WTR is a free repository of research papers, reports, research abstracts and links to research findings from leading research journals indexed and searchable to ensure easier access to topics of interest. The site is developed and run by the Public Transport Research Group at the Institute of Transport Studies, Monash University.
