

Populate or Perish – Is a Big Australia Better? Infrastructure demand, population and the future of Melbourne Burwood Electorate Conference for the Liberal Party 8th August 2017

Smart Management of Infrastructure Demand

Populate or Perish - Is a Big Australia Better?

Prof Graham Currie Public Transport Research Group Monash Institute of Transport Studies Monash University

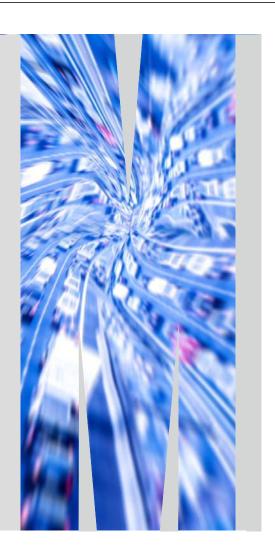

Introduction

The Problem

Limited Solutions

This session considers Smarter ways to manage future (transport) infrastructure demands in Melbourne

- Considering:
 - Infrastructure Demand
 - Conventional approaches to meeting demand
 - Alternative and smarter approaches

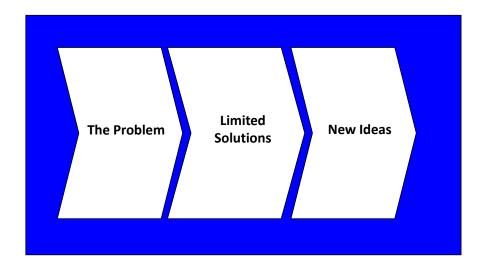

3

...and is structured as follows

Introduction

The Problem

Limited Solutions

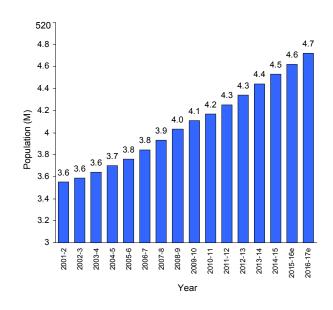

The future is high density cities

Since 2001 Melbourne population has grown by 1.1M (30%); we added Adelaide to Melbourne in the last 15 years

Population Growth (M)

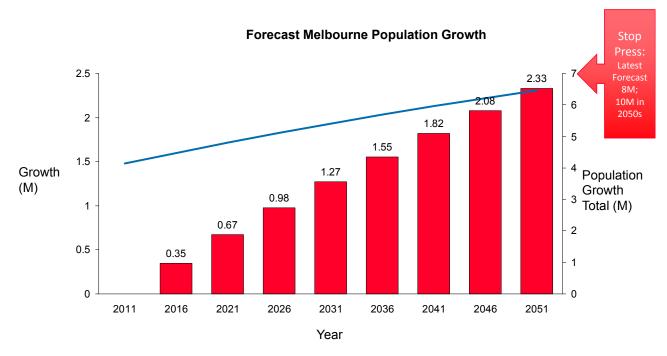

)

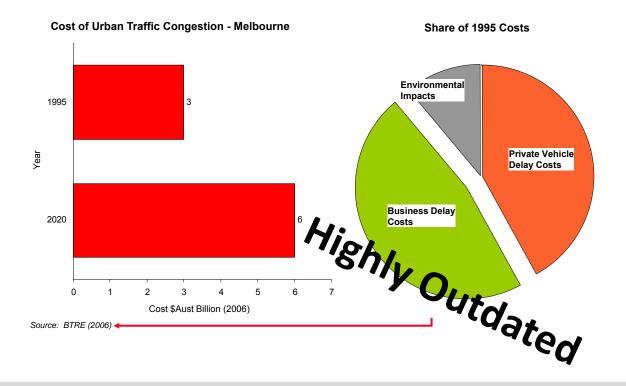

Melbourne is expected to increase in size by another 1-2M people in 20-30 years

Source: Victoria in Future (2012)

Urban traffic congestion in Melbourne costs \$3B p.a. (2005) and will double by 2020

11

Congestion 'hotspots' are expected to spread spatially....

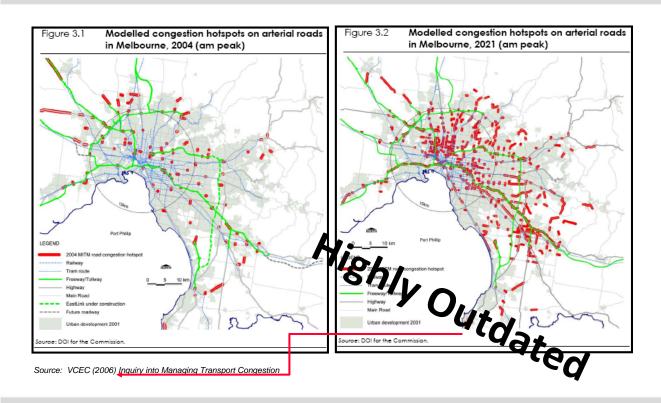

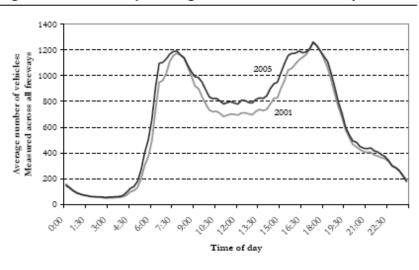

Figure 3.3 Peak spreading on Melbourne's freeways

13

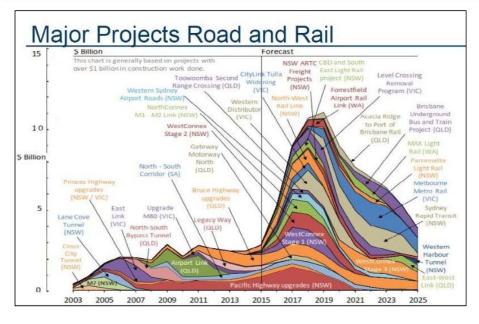

Introduction

The Problem

Limited Solutions

We are trying to build our way out of the Infrastructure Gap

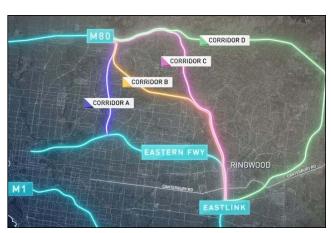

- \$700B Australian Infrastructure Investment **Deficit**
- 1.6% of Australian GDP invested in Infrastructure; highest in the **OECD**

New Roads are a BIG part of this...

04 CBD 06

Western Distributor

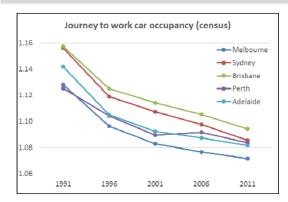

North East Link Options

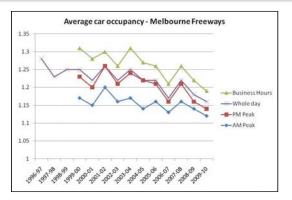

East West Link

...but passenger use of cars is increasingly inefficient...

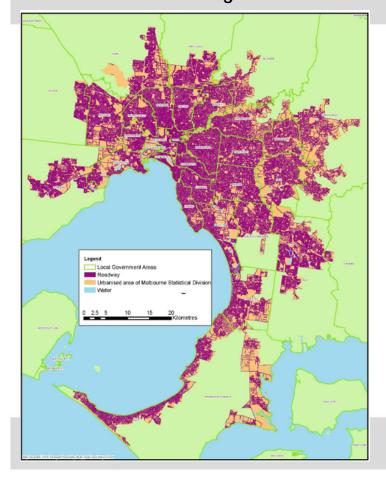

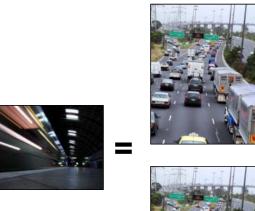

17

..and new roads are insignificant to the whole Melbourne transport problem

Public Transport Investment is highly volume effective

1 Rail Tunnel=4.8 Westgate Freeways

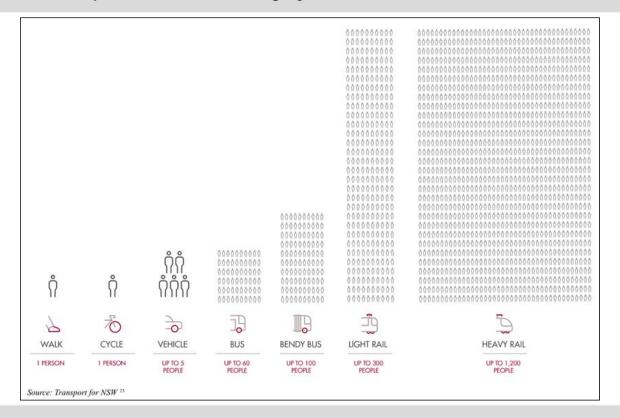

Note: Assumes a 2 way rail tunnel carrying 24 trains an hour at and average load of 800 = 38,400/hr and a freeway lane = 2000 vehicles an hour/Lane

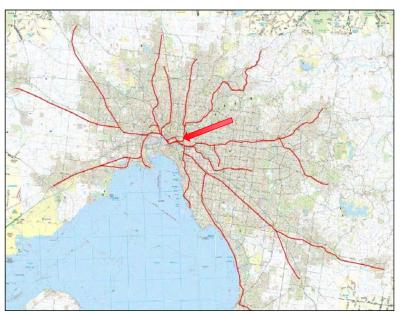

19

Public Transport Investment is highly volume effective

But Melbourne Metro Is a TINY dint in Melbourne rail transport needs; which has a significant legacy liability

The Rail Reliability Legacy

Reported Signaling Disruptions

- 1,900 signal failures p.a. (12 months to August 2013)
- 5.2 per day
- Biggest Locations:
 - Flinders Street Station 89
 - North Melbourne 71
 - Newport 51

Metro Trains

"We are installing advanced computer technology which improves control of the signalling system, but our field equipment is outdated and requires replacing,"

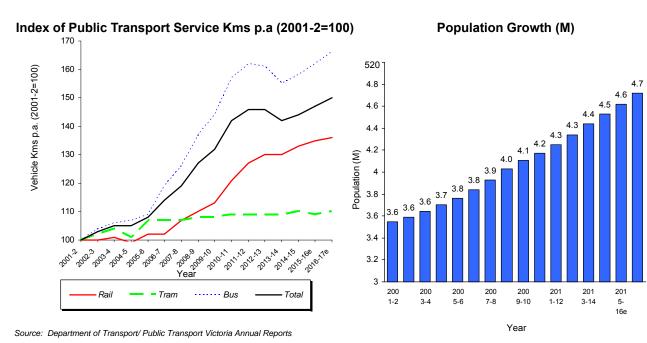

Source: Adam Carey, The Age, 'Signal failures are causing chronic rail delays' 23/10/2013

1

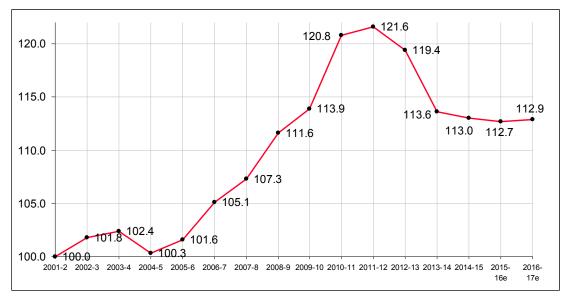

Despite progress; we have under-invested in public transport – and are now going backwards

...in last 10 years, per person service increased 22% then declined since 2011 (we have declined by 9% points); recent trend is flat

Relative Service Level Per Head

Year

Source: Department of Transport/ Public Transport Victoria Annual Reports

23

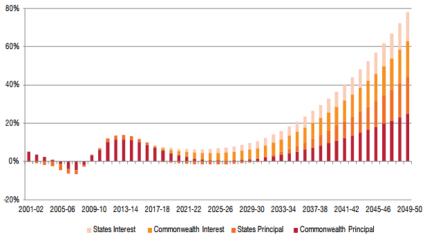

A stark fact is: our current infrastructure is most of what the future holds

In 20 Years:

 95%+ of Our Transport Infrastructure will be Whats in Operation TODAY

And we have a gigantic infrastructure funding gap

PwC's paper on *Tax Reform* shows that the combined annual deficits of Australian governments could rise from \$27.4 bn in 2011-12 to an estimated \$583 bn by 2049-50 – almost 6 per cent of GDP.

Net debt: Commonwealth and state/territory governments as a % of GDP

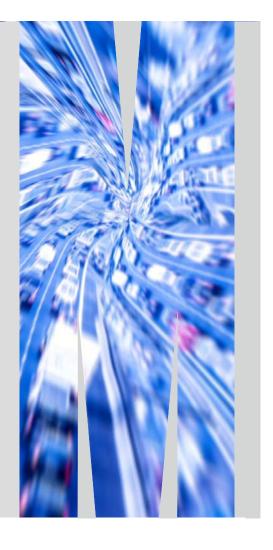

25

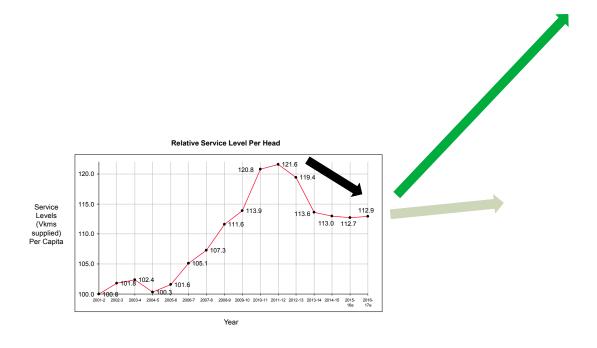

Introduction

The Problem

Limited Solutions

INVEST, INVEST, INVEST - SERVICE LEVELS

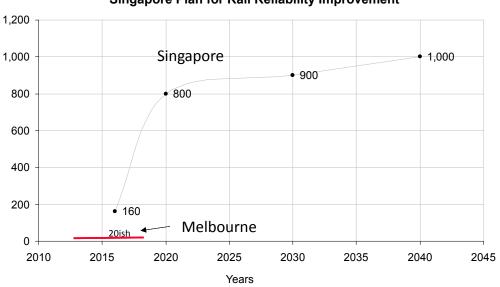

27

INVEST, INVEST, INVEST - RAIL RELIABILITY

Singapore Plan for Rail Reliability Improvement

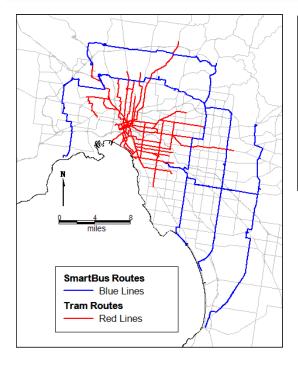

Source: Land Transport Authority of Singapore

INVEST, INVEST, INVEST - TRAM/BUS RAPID TRANSIT

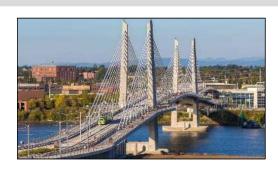

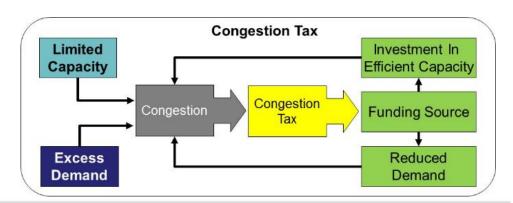

29

Get Sustainable Funding

Employment Tax / Versement Transport

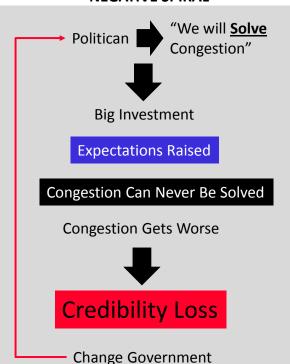

MAKE THE PROBLEM FUND THE SOLUTION

Take a new approach to discussing Congestion "SOLUTIONS"

NEGATIVE SPIRAL

POSITIVE APPROACH

"Congestion CANNOT be solved – we reduce worst impacts"

Big Investment

Expectations LOWERED

Congestion Can Never Be Solved

Congestion Outcomes as Expected

Credibility Gain

NO Change Government

Make a shift to MANAGE DEMAND not provide SUPPLY

Paradigm shift

From

PREDICT and PROVIDE

To

PREDICT and **PREVENT**

TDM

•It aims at reducing the demand at first place, rather than extending facilities to meet for ever growing demand.

CONGESTION REDUCING MEASURES

Supply side

- •Efficient use of existing facilities.
- Increasing the supply

Demand side

- Managing the existing demand.
- •Controlling the growth of demand.
- •Cutting down the existing demand.

TDM Measures - Politically HARD but necessary

PULL MEASURES

- Traffic management.
- Improvement of alternative modes.
- •Integrated multi mode transport system.
- •New technologies.
- •Pull measures aims at attracting the road users to alternative modes, whereas push measures tries to demoralize car users.

PUSH MEASURES

- Increasing vehicle occupancy.
- •Influencing time and need of travel.
- •Creating deterrence by introducing charges.
- •Imposing restrictions.
- ·Land use and urban planning

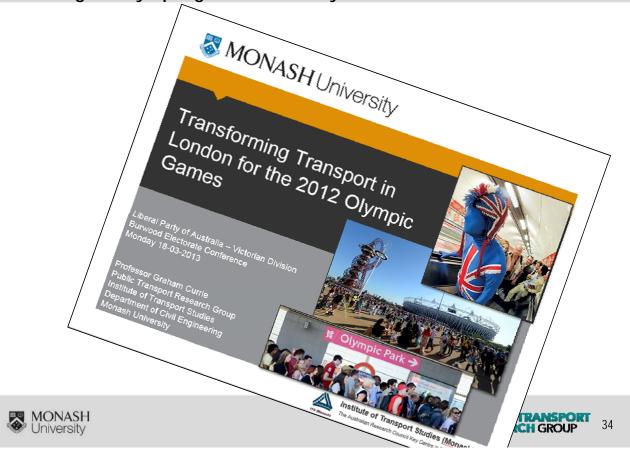

Demand side

- •Reducing the vehicle by modal change and HOV.
- •Redistributing the vehicles by changing time and space of travel.

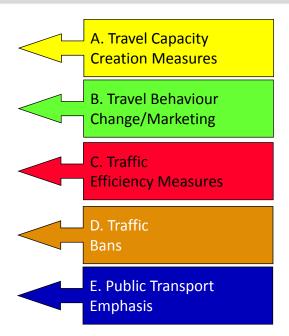

In March 2013 I was here explaining how congested London successfully ran the largest Olympic games in History

This was achieved using TDM
